Q21. Read the following passage and answer the questions given below.

The Indian judiciary succumbed, many would say, by agreeing to a paltry compensation and by settling all civil and criminal liability of the company. Then the company did everything to ensure that its complicity and responsibility was diluted. One such instance is of not informing doctors of the real toxicity of the chemicals released and the treatment for them. ICMR failed the victims by not completing the studies that would have established the cause of their ailments and suggesting treatment protocols. So, there is a name for the disease—Bhopal Gas Disease—but no identification of who the affected are or what their treatment status is. The Union government, as a result, continues to argue that only 5,295 people died—in the first instance and never later—and 6,199 have been permanently disabled. refuses to accept, without medical history, that the tragedy has been much more enormous and that death and disability stalk every house in the localities close to the factory. The state government put the final nail in their coffin by distributing the compensation amount so widely that it does not matter who is the actual victim and who is not.

 5. None of the above.
- Q23. Read the following passage and answer the questions given below.
- When we feel uncomfortable or stressed, we tend to double down on what has worked for us before. Overusing any quality will eventually turn into a liability. Too much prudence congeals into timidity. Overemphasizing practicality stifles imagination. Consistency turns into predictability. Most of us tend to view opposites in a binary way. If one is good, the other must be bad. Through this lens, the only alternative to prudence is recklessness. If you're not being practical, you're being unrealistic. Both invite failure. Also, if you value a quality such as prudence, it's easy to confuse its positive opposite — boldness — with its negative opposite — recklessness, which is precisely what prudence is designed to protect against. What we don't see that it makes more sense to balance practicality and innovation, boldness and prudence, collaborativeness and self-reliance, agility and consistency—without choosing sides between them.
