## How to recover crash hard disk data

### How to recover crash hard disk data -

If a hard disk is crashed then its data can be recovered.

However, for this, you have to use Data Recovery Software.

For this, use iCare Data Recovery Software.

All types of files can be recovered from this software.

If your hard disk is not visible in your computer and it is spinning, then you can go to Device Manager for this.

You can take information from Google to open Device Manager in your operating system.

- After that go to Device Manager and make a new volume of hard disk. This option will come on right click

After this, you will have to format hard disk as soon as the process starts.

Once you have created a new partition, you can use Recovery software.
