

After the re-emergence of the Lucky Ransomware and affecting the email service,

It is being called the biggest malware campaign of the first half of 2017.

According to zednet.com, the Ransomware attack that was deemed to have ended, has now reverted and the result is that on August 28, Just about 24 hours of email sent to the US about 23 million malware.

In the subject of these mails, 'Please Print This', 'Documents' and 'Scan' were sent.

While disclosing this malware, a cyber-security firm in the US, said that it is the biggest malware campaign that was detected in the early months of 2017.

It was reported that the malware payload was hidden in a zip file in the Visual Basic Script (VBS) file

Once clicked, the most recent version of the lockey ransomware will be downloaded.
