## REARRANGEMENT OF SENTENCES

- (A) The floater sits on the water's surface, collecting any trash that bobs its way, while the 10-foot skirt that extends into the water blocks any waste from flowing beneath it.
- (B) Between California and Hawaii churning with up to 2.65 million tons of plastic waste.
- (C) To catch as much garbage as possible, the net will need to be emptied every four to six weeks.
- (D) The Pacific Ocean has a pollution problem.
- (E) As Forbes reports, the main tool that The Ocean Cleanup project is using to combat pollution is a 2000-foot floating net.
- (F) It's especially apparent at the Great Pacific Garbage Patch, a 1-million-square-mile stretch of water
- (G) Now, after five years in development, an initiative aimed at reducing the floating trash heap is finally ready to launch.

- (A) And thousands of years later, archaeologists found traces of this fermented, cheesy goodness, preserved in chemical signatures left behind in the vessels.
- (B) About 7,200 years ago, farmers living near the Adriatic Sea packed clay pots full of soft cheese.
- (C) Cheese making was likely a game changer for early farmers; it may have helped lactose-intolerant adults ease into eating dairy, as fermentation reduces dairy's lactose content, the researchers wrote.
- (D) This new evidence, found at two sites in what is now Croatia, dates to 5200 B.C. and pushes back cheese production in the Mediterranean by more than 2,000 years, scientists reported in a new study.
- (E) From the Mediterranean into Europe, an expansion that began around 7000 B.C. and lasted about 3,000 years, according to the study.
- (F) And as a portable, preserved food, cheese would have been a dependable source of nutrition as farmers moved
